About Me

Full-stack developer, AI enthusiast & Designer passionate about building intelligent and scalable solutions. With experience in Machine Learning, Deep Learning, and modern web development, I create applications that combine technology and design to deliver intelligent user experiences.

Education

Higher School of Computer Science 08 May 1945 (ESI SBA) Software engineering Master degree Engineer Diploma in software engineering	Sidi Bel Abbes, Algeria 2023 – Currently
Mohamed Boudiaf University License 2 Computer Science	M'sila, Algeria 2021 – 2023
• Awards/Honors: Graduated among the top students, class of 2021	

Experience

IT Internship: Algérie Telecom – M'sila	Sept – October 2024
• Assisted in diagnosing and resolving system and network issues while supporting internal users and monitoring connectivity across departments. Documented troubleshooting procedures and contributed to improving workflow efficiency.	

Projects

Resynex <i>AI-Powered Clinical Research Platform</i> <i>End-of-Studies Project</i>	resynex.tech
• Architected and deployed a six-service microservices platform (Spring Cloud Gateway, Netflix Eureka, React/TypeScript, Node.js/Express, Python/FastAPI) on a Linux VPS, orchestrated with Docker Compose behind a TLS reverse proxy, with a Jenkins pipeline for continuous deployment.	
• Built a Patient Digital Twin Generator on a Neural Boltzmann Machine in PyTorch, trained end to end on 3,847 patients from the PPMI Parkinson's registry: 0.88 concordance for time to a motor milestone and 75% of the variance explained across nine clinical outcomes, with calibrated predictive intervals.	
• Implemented RAG knowledge notebooks on ChromaDB and Google Gemini with answer-level citations and explicit refusal, Kernel SHAP explanations for every prediction, and LitScope , a unified literature search across PubMed, Semantic Scholar, arXiv, and OpenAlex.	
AP Coach <i>Football Club Management Platform</i> <i>Client Project</i>	apcoach-dz.cloud
• Offline-first React/TypeScript PWA over an Express, Prisma, and PostgreSQL API: every feature works with no connection and syncs across a coach's own devices through an IndexedDB write queue. Role-based access for four staff roles, a live analytics dashboard, automatic monthly PDF reports, and a bilingual Arabic/French RTL interface.	
Delivery Platform <i>Full-Stack</i>	github.com/.../Delivery-Platform
• Developed a smart delivery platform using Express.js, Spring Boot, and FastAPI in a microservices architecture. Integrated MongoDB and MySQL, implemented WebSockets for real-time tracking, secure authentication with JWT and OAuth, and an optimization microservice for intelligent order assignment and route optimization.	
E-Learning Platform <i>Full-Stack</i>	github.com/.../E-learning
• Developed an online learning platform with authentication, course management, and user dashboards. Built an admin panel for teachers to manage students, grades, and modules using React, Node.js, Express, MySQL, and Sequelize.	
Community Management Platform <i>Full-Stack</i>	github.com/.../SocialWorksManagement
• Developed a community management platform with modules for user management, event scheduling, and project tracking. Implemented secure authentication, role-based access control, and dynamic dashboards using React, Node.js, Express, and MySQL.	
Movies Recommendation System <i>Machine Learning</i>	github.com/.../Movie-Recommender-ML
• Developed a movie recommendation system using scikit-learn, pandas, and NLTK to analyze movie descriptions and suggest similar titles based on user search queries through content-based filtering.	

Skills & Languages

AI & Machine Learning: Machine Learning, Deep Learning, LLMs, RAG & Vector Databases
Backend: Spring Boot, Express.js, FastAPI, Microservices & API Design, Authentication & Security (JWT, OAuth)
Frontend & Design: React, React Native, UI/UX Design
Data & Infrastructure: MySQL, MongoDB, Oracle SQL, Docker, Kubernetes, System Design & Scalability
Languages: Arabic – Native, French – B2, English – B2
